

Technician Guide

Your jobs, your photos, your sign-off

What is this tool? It tells you which machines to work on, keeps a record of what you did with photos, and creates the service report that your engineer and the client sign.

In this guide	What you will find
Getting started	Signing in and putting the app on your phone.
My Work	Your jobs: open, completed, and reports.
Doing a job	Start, work, photos, and closing it.
Found a problem?	Telling your engineer about a part that needs attention.
The service report	Getting your engineer and the client to sign.
Quick reference	One page to keep on your phone.

Open the tool at mihirsethidp.github.io/Maintenance-module on your phone or computer. Install it from the browser menu so it opens like an app, even without signal.

1. Getting started

Do this once.

Signing in

1. You get an **email invitation**. Open it and choose your own password.
2. After that, go to **mihirsethidp.github.io/Maintenance-module**, type your email and password, and press **Sign in**.
3. Forgot your password? Type your email on the sign-in screen and press **Forgot password?**. A new link comes to your email.

Put the app on your phone

Your phone	How to install the app
iPhone	Open the site in Safari , tap the Share button (square with an arrow), then Add to Home Screen . A "Maintenance" icon appears like any other app.
Android	Open the site in Chrome , tap the three-dot menu , then Add to Home screen (or Install app).

You will see **My Work** when you sign in. That is your home screen — every job you have to do is there.

No signal at the plant? The app still opens and shows everything from your last sync, with an amber banner telling you how old the data is. Technicians can even finish jobs and report problems with no signal at all — the phone keeps the work and sends it by itself when the connection returns. Other actions (reviews, new work orders, signatures) need a connection.

You can visit any plant You are not tied to one site. You can look up **any** plant and any machine in the tool — useful when you are sent somewhere new. You can only start and close the jobs that are given to you.

2. My Work

Three tabs. Everything you need is in them.

Tab	What is in it
Open	Jobs waiting for you. Also any job your engineer sent back for a fix — those show a red Returned label and his note.
Completed	Jobs you finished. Awaiting review means your engineer has not looked at it yet. Completed means he approved it.
Reports	One line for each day you worked at a plant. This is where the service report is made and signed.

The **bell** at the top shows a red number when something needs you — a new job, or a job sent back. Tap it to go straight there.

If a job shows "**Check back <date>**", your engineer has put it on hold — usually waiting for a part. Nothing for you to do until then.

Every job created since late August carries a **number like WO-2026-0147**. It shows on the job, in the log, and on service reports — use it when you talk about a job on the phone. Older jobs from before numbering have none.

3. Doing a job

Start it, do it, close it.

1. Open **My Work**. Find the machine in the **Open** tab.
2. Press **Start Work**. Now everyone can see you are working on that machine.
3. Do the work on the machine.
4. Press **Mark Complete**. Fill in the form and press **Confirm**.

Small job, finished in a few minutes? Press **Complete now** instead of Start Work. It records the start and the finish together.

No signal? Finish the job anyway Close the job exactly as normal — photos, notes, everything. The phone shows an orange bubble: "**saved on this phone — sends when back online**", and the job shows **Waiting for signal**. The moment your phone finds a connection, it all sends by itself. Tap the orange bubble any time to see what is waiting, or to send it now.

The closing form

- **Service guide** — tap to open it if you want a reminder of the usual steps for that machine. Nothing to tick.
- **Photos** — press **Add photos** and use your camera. If the job says photos are needed, you cannot close it without at least one. Breakdowns always need photos.
- **Completion notes** — tap a ready-made phrase ("No abnormalities", "Tested OK") or type your own. For a breakdown you must describe what happened.

What photos to take The machine before you start, the part you worked on, and the machine working again at the end. Also photograph the nameplate if the make or model is not in the tool. Up to 8 photos per job — they go into the report the client sees.

If your engineer sends a job back

It appears at the top of your **Open** tab with a red **Returned** label and his note — for example "add a photo of the new seal". The machine stays in service; only the record needs fixing.

1. Read his note.
2. Press **Fix & send again**.
3. Change the notes, add the photos he asked for, and press **Send again for review**.

4. Found a problem?

Tell your engineer. He decides what happens next.

If you see a part that needs **servicing**, **repair**, or **replacement** — even on a machine you were not sent for — report it. Two ways:

- **While closing a job:** in the closing form, open "**Found something needing attention?**", write what is wrong, and choose repair, servicing or replacement.
- **Any other time:** open the machine (scan its **QR sticker** with your camera — fastest) and press **Report issue**.

Your engineer sees it straight away. He will schedule the work, mark it as already handled, or explain why nothing is needed. What you report also appears in the service report, so the client knows what you found.

Do not wait to be asked A weeping seal or a noisy bearing you report today is a small job. The same part left alone is a breakdown next month. Reporting it takes twenty seconds and it is on record that you found it.

5. The service report

Your work, signed by three people.

At the end of a visit, the tool puts together a report of everything you did at that plant that day — the jobs, your notes, your photos, and the problems you reported. Three people sign it, in this order:

Who signs	How
1. You	Go to My Work → Reports , find the day, press Create & sign . Pressing it signs the report as you and sends it to your engineer.
2. Your engineer	He checks it and signs. If something is missing he sends it back — the line turns Needs changes with his note. Fix it and submit again.
3. The client	When the line says Ready for client signature , press Client sign-off and hand your phone to the client. They sign on the screen with a finger and type their name and job title.

Sometimes your engineer makes the report for you If he approves your last job of the day, he can prepare and sign the report himself. Then your Reports tab shows **"Report prepared by your engineer"** and only one thing is left: press **Client sign-off** and hand the client your phone.

The line **"Waiting on review"** means a job from that day is still with your engineer — the report can only be made once every job is approved.

After the client signs, the report is **locked**. Nobody can change it — not you, not your engineer. That is what makes it proof of the work. A signed report can be saved as a PDF any time: open it and press **Download PDF**.

The **bell** keeps you on track without hunting: it rings when a job is sent back to you, when your report needs changes, when a report is **ready for the client's signature** (collect it before you leave the site), and when every job of a visit is approved so the report is yours to raise. Tapping a notification opens the exact tab it lives in, and the tab names themselves show what needs you — "Open · 1 sent back", "Reports · 1 needs you".

Did more work on a day whose report is already signed? The Reports tab shows that day again with a **Report new work** button. It makes a **second** report covering only the new jobs — the signed one is never touched, and the client signs the new one the same way.

Client not there? Leave it. The line stays at **Ready for client signature** and you can collect it on your next visit — or your engineer can collect it on theirs. Your engineer has already signed, so the work is recorded either way.

6. Quick reference

Keep this page on your phone.

I want to...

I want to	Where
See my jobs	My Work → Open
Start a job	Start Work on the job
Finish a small job in one step	Complete now
Close a job I started	Mark Complete
Add photos	Add photos in the closing form
Report a bad part	Report issue on the machine, or in the closing form
Find a machine fast	Scan its QR sticker with your phone camera
Fix a job sent back to me	Fix & send again on the red Returned job
Make the service report	My Work → Reports → Create & sign
Get the client to sign	Client sign-off — hand them the phone
See a machine's past work	Tap the machine name anywhere

Questions

I cannot close the job — it asks for photos.

That job needs at least one photo. Press Add photos and use your camera. Breakdowns always need photos.

The job is not in my list.

It has not been given to you yet. Call your engineer — he assigns the work.

My job says "Check back" with a date.

Your engineer put it on hold — usually a part is on order. It comes back on that date; nothing for you to do until then.

There is no signal at the plant.

Work normally. Finishing a job, sending one again, and reporting a problem all save on the phone and send themselves when the signal returns — the orange bubble shows what is waiting. Just do not clear the browser or delete the app while something is waiting to send.

I finished the job days ago but only recorded it today.

Set the completion date to the day the work was really done — the tool allows up to 30 days back, never a future date. The record also notes when it was saved, so a late entry is honest, not hidden.

The client signed but the report looks wrong.

A signed report cannot be changed. Tell your engineer — he will make a correction report.

Can I put a machine into maintenance myself?

No. Engineers create the jobs; you do them and close them. If a machine needs work, use Report issue.

Need help? Call your service engineer. For sign-in problems, contact your administrator. The tool is improved often — small differences from this guide are normal.
